

BARCODE DETECTION SYSTEM

RE IND automations can be expanded with the addition of BARCODE detection system, that is an industrial laser reader that allows the reading of linear barcodes present on the pieces to be painted. In this way it's possible to memorize, through the PLC program, the type of piece and, moreover, it's also possible to associate to each barcode its specific processing recipe, which will contain the appropriate parameters (previously set) for the execution of particular painting appears.

TECHNICAL FEATURES

- Straight and 90° output window.
- 500-1000 scan/sec.
- 2 input + 2 output.
- RS232 + RS485 serial port.
- ID-NET and X-PRESS.
- 10-30Vdc, IP65, 0-50 °C.
- Genius Platform.
- Typical reading range: 50 - 300 mm.
